Trans. of Vysokomolekulyarnyye Soyedineniya (USSR)  
1960, v. 2, no. 1, p. 82-84.

The synthesis, polymerization and copolymerization of  
1-fluoro-1,1-dichloro- and 1,1-difluoro-1-chloropropylene-2 were accomplished by the dehydrochlorination  
from 1-fluoro-1,1,3-trichloro-propane and 1,1-di-  
fluoro-1,3-dichloro-propane, respectively. The co-  
polymers of 1-fluoro-1,1-dichloro- and 1,1-difluoro-  
1-chloropropylene with styrene have glass transition  
temperatures higher than the glass transition tempera-  
ture of homopolymers which is explained apparently by  
the formation of fluorine-hydrogen bonds between the  
polymer chains. (See also 60-10042, 60-22906)
